

SonicWALL Firewall

Do you care about the security of your data? Data Security is just not an option anymore!

SonicWALL Today, small business is more susceptible to the attacks. As large companies tighten their security, it's the small business operator that becomes the easy prey. Viruses, worms and Trojans always pose a costly security threat, and now the Payment Card Industry (PCI) has mandated compliancy requirements to their merchants, to prevent credit card data breaches. Low-end routers do not provide adequate protection from these threats. High-end solutions are not affordable. This integrated solution provides business-class firewall security at a price that any small businesses can afford.

SonicWALL The bundle includes a powerful hardware firewall, a one-year subscription to Anti-Virus, Anti-Spyware, Intrusion Prevention, and Content Filtering Services, with one-year firmware and support updates included, for all-in-one protection. It provides protection against threats including viruses, spy-ware, worms and Trojans. These services are enabled via the powerful SonicWALL firewall, referred to as a unified threat management appliance. Don't put your business on the line by using a low-end router made for home use! Trust your business only to SonicWALL!

SonicWALL Stop improper web surfing before it begins! This product can block your employees from damaging your POS system server, whether accidentally or on purpose. Make it easy to: Eliminate viruses, worms and Trojans; Block spy-ware, ad-ware, key-loggers, malicious mobile code (MMC) and other dangerous applications; Protect against intrusions from hackers; Filter pornography and other forms of unacceptable and illegal online content; Restrict recreational file-sharing, multimedia streaming and downloading from peer-to-peer applications; Implement comprehensive security measures with a single installation; View reports on threats and activities.

SonicWALL The SonicWALL delivers the layered protection your business needs, through an integrated deep packet inspection firewall, and in an easy-to-use, low-cost platform. The compact unit includes a single Ethernet WAN port and four-port LAN switch, allowing multiple devices to connect safely to the network. Comprehensive logging capabilities assist with remote troubleshooting. The bundle includes integrated support for Anti-Virus, Anti-Spyware, Intrusion Prevention Service, and Content Filtering Services. Purchase includes 1st year subscription updates. Future Year2+ subscription updates are paid by DCRS, with a Support Plan.
