

## ***LiveManager Connection***

**Would you like a secure access connection to your store's  
POS Server?**

**How about from anywhere?**

***LiveAlert&Connect*** - Our PCI-validated, internet-based monitoring and access services offer built-in security like two factor authentication and strong password policies. Unlike pcAnywhere (a dial-in product used by some POS providers), only authorized users can pass through the firewalled Host to use ***LiveAlert&Connect***, and all users are logged for maximum security. ***LiveAlert&Connect*** has been security assessed by Trustwave as meeting PCI-DSS requirements. See the ***LiveAlert&Connect*** document for more details on this store-level subscription.

***LiveManager Connection*** can securely connect you to your POS Server from anywhere!

***Stay Connected to Your Stores – LiveManager Connection*** service can access your POS Server from a designated email address at home, office, or anywhere.

***View Reports & Print\**** - ***LiveManager Connection*** allows you to view your store's reports.

\*The ability to print accessed reports is variable, based on type of report, type of printer in use, and type and version of POS system at your store. A manual alternative procedure, outside the POS system, has been developed that can enable a printing workaround when necessary.

***Manage Your Database – LiveManager Connection*** allows you to manage your database, provide access to file transfers, and more!

***Get Connected Faster – LiveManager Connection*** delivers much faster service, since ***LiveAlert&Connect*** at the store is less likely to be “turned off” by your store personnel like pcAnywhere. When you want to connect, you want it now, and you do not want to have to call the store and find someone at the store to “turn it on”, just so you can connect. And what if your store is closed?

How does ***LiveManager Connection*** work?

8.25.11

**Insure Security - LiveManager Connection** users must pass through the **LiveAlert&Connect** Host firewall to connect to their approved store's POS Server. Only authorized users, with authorized licenses, can pass through the firewalled Host to use **LiveManager Connection**, and all users are logged for maximum security.

**LiveManager Connection** subscription service provides access connection for one designated email address for the first year, to your first **LiveAlert&Connect** site's POS Server. Additional sites and additional email addresses are available. Year 2+ renewals are priced even lower, providing your **LiveAlert&Connect** store subscriptions are renewed and remain current, so your **LiveManager Connection** can connect.

**Do you know a POS vendor that provides a PCI-validated connection solution?**
