

DCRS Value Added
Managed Service

***LiveBackup
of your Critical
RES POS Data files***

Disasters that only happen to other people:

- **Fire**
- **Theft**
- **Water Damage**
- **Major Hardware Failure**

Onsite backup recovery is great, but does nothing to protect your POS Server from the above perils. So what is your Risk?

- **Your Data**
- **Your Money**
- **Your Business**
- **Your Customers**

Now you can ensure *Offsite* backup, to recover your Critical POS Data files, with our *LiveBackup* services for Micros RES, for pennies per day.

LiveBackup Services – Online backup, to an offsite facility, provides an important disaster recovery insurance policy when you need it. ***LiveBackup***, our offsite backup service option to ***LiveAlert&Connect***, provides that extra level of security to ensure your critical data is recoverable when your onsite backup is not available. ***LiveAlert&Connect*** can monitor your POS Server to insure predefined backup routines are run automatically on a daily basis. If for some reason the process does not complete, ***LiveAlert&Connect*** can notify us, so we can quickly fix whatever issues are causing the failure.

Do you know a POS vendor that can provide this?
