

MICROS 1D/2D Capable Barcode Scanners

MICROS Systems has released the DS9208 and DS4208 Scanners, capable of decoding 1D and 2D barcode formats.

DS9208

DS4208

At this time, MICROS POS applications do not support 2D barcode formats.

The introduction of these scanners is meant to “future proof” customers, allowing them to use the new scanners with MICROS applications with standard 1D “UPC” style barcodes, and take advantage of 2D formats when application support for them is announced.

Both new devices provide superior scanning performance of 1D, 2D and PDF barcodes from traditional media or LCDs (i.e. mobile phone or tablet displays.) The ability to read barcodes from mobile devices will be increasingly important to a wide range of CRM features.

The handheld DS4208 bar code scanner provides fast, reliable scanning in an ergonomic, lightweight form. The ruggedized design allows the scanner to withstand 6ft falls to concrete and meets IP43 particle and liquid resistance specifications.

The counter top DS9208 features a compact footprint, sleek design and intuitive operation with two confirmation LEDs and adjustable audio tones.
