

MICROS/Epson TM-T88IV ReStick Printer

The TM-T88IV ReStick thermal printer is an excellent choice for printing exception labels, coffee labels, bag tags, etc.

The ReStick printer is designed to print on repositionable, linerless label stock that allows users to easily remove the label without leaving any adhesive residue. This printer is also capable of printing on thermal receipt stock if desired by changing out the label roll with receipt paper.

Printing labels with the TM-T88IV ReStick printer will save quick service businesses time and money by allowing them to indicate the exact details of a customer's order and allows the customer to confirm that they have received exactly what they ordered prior to leaving the establishment or even opening the bag.

It is important to note that this printer is primarily designed as an exception printer for printing on label stock. It is imperative the end user understands this is an exception printer rather than a receipt printer, **as the price of the ReStick label stock is considerably more expensive than standard thermal paper, and is available from limited sources.**

The TM-T88IV ReStick printer is available from MICROS using 80mm (3.125") paper, with IDN and Serial interface options. If there are more than 3 Serial peripherals are to be used on a MICROS Workstation 5a (i.e. Serial Thermal POS Receipt Printer, Serial Scanner, Serial Scale, Serial Coin Dispenser, etc), the IDN interface option should be selected.

These printers ship with the Epson nameplate.
